

THATO KHONKHE

Full-Stack Developer

4390 Mokotse Street, Diepkloof, Soweto | 081 373 8241 | Siyaballack1@gmail.com | [linkedin.com/in/thato-siyabonga-khonkheb07a12226](https://www.linkedin.com/in/thato-siyabonga-khonkheb07a12226)

PROFESSIONAL SUMMARY

Solutions-driven Full-Stack Developer with hands-on experience across React, TypeScript, Node.js, Python, and Django, building end-to-end web applications with integrated AI capabilities. Proven track record shipping full-stack systems from architecture through deployment, including a production recruitment platform and multiple independent projects. Continuously expanding capabilities across modern JavaScript/TypeScript tooling and cloud infrastructure while translating business requirements into secure, well-structured applications.

EXPERIENCE

Mindworx Consulting & Academy — Full-Stack Developer (WIL)

September 2025 – Current

- Built an AI-powered CV screening and candidate-matching platform: recruiters upload raw candidate CVs, which are parsed and structured using the Google Gemini API, then scored against a pasted job description across qualitative fit, experience, and skills to produce a weighted match score.
- Implemented batch CV upload, an automated Mindworx-branded CV template generator from parsed candidate data, and an AI-generated candidate screening tool that produces interview questions tailored to the CV and job description.
- Completed structured Mindworx training in AWS Cloud Computing, business analysis methodology, and Machine Learning, applying it directly to the design and delivery of the recruitment platform above.

EDUCATION

North West University — BSc in Information Technology

2021 – 2024

Jet Nteo Secondary School — Matric NSC

2016 – 2020

SKILLS

Programming Languages: Python (PCAP Certified), JavaScript, TypeScript, Java, C#, SQL, HTML, CSS

Web Development: React, Node.js, Express, Django (MVT Architecture, ORM, Authentication, Django Template Language), Flask, Jinja2, Bootstrap 5, Chart.js

AI & Data Engineering: Google GenAI SDK (Gemini API), Prompt Engineering, Automated Data Extraction & Parsing, Predictive Modeling, Data Cleaning & Exploratory Data Analysis (EDA)

Data Libraries: Matplotlib, Pandas, NumPy, pyodbc

Platforms & Tools: Git, GitHub, AWS, Power BI Desktop, Power Query, VS Code (Jupyter Notebook), SSMS (SQL Server Management Studio), Visual Studio, PyCharm, Excel

Methodologies & Soft Skills: Agile, Scrum, Waterfall, Teamwork, Communication, Problem Solving, Critical Thinking

PROJECTS

Mabals Match IQ — Full-Stack Football Analytics Platform | github.com/Mabals/mabals-matchiq

- Built a full-stack football analytics application with a React/TypeScript frontend and a Node.js/Express backend, integrating the football-data.org API to surface live fixtures, team form, and head-to-head statistics across four leagues.
- Engineered a Google Gemini API integration using structured prompt engineering to generate real-time, data-grounded match insights (result tendency, Both Teams To Score, Over/Under 2.5 goals) strictly derived from computed statistics, with no fabricated data.
- Designed a secure client-server architecture keeping all third-party API keys server-side, with rate-limit-aware error handling and a responsive, tabbed React UI.

EduTrack — School Management System | github.com/Mabals/EduTrack

- Built a full-stack Django web application implementing CRUD operations for student and teacher records, with a relational data model using ForeignKey relationships to link students to classes and teachers to departments.
- Implemented authentication with view-level access control, a Chart.js-powered analytics dashboard, and integrated the Google Gemini API to generate on-demand AI-written insights from live enrollment and staffing data.

ShopWave E-Commerce Sales & Customer Analysis | github.com/Mabals/shopwave-analysis

- Cleaned and analyzed a two-table e-commerce dataset (customers and orders, ~6,800 combined rows) using Python and Pandas, resolving inconsistent formatting, mixed date formats, and missing or invalid data through documented, business-justified decisions.
- Built an interactive Power BI dashboard with dynamic slicers, KPI cards, and multi-dimensional revenue breakdowns, surfacing insights including a concentrated revenue-driver category and a quantified order cancellation/return rate.

Other projects: *Stratum Analytics, TLA Project* — github.com/Mabals

CERTIFICATIONS

- PCAP — Certified Associate Python Programmer
- AWS Certified Cloud Practitioner
